

THÂMIRIS BARCAROLO

Data Analyst • BI & Analytics Engineering

Osasco-SP, Brazil • thamiris.barcarolo@gmail.com

[linkedin.com/in/thamirisbarcarolo](https://www.linkedin.com/in/thamirisbarcarolo) • github.com/tbarcarolo • tbarcarolo.github.io/project_portfolio

Portuguese (native) • English (upper-intermediate – B2)

PROFILE

Data Analyst working across the full data lifecycle — from the database to the decision dashboard. I model data in PostgreSQL/Supabase, write the queries and functions (RPCs) that power products in production, build batch import/validation pipelines, and investigate and fix data inconsistencies in production. I work with Git, Pull Requests, and spec-driven development, aiming to grow toward Analytics Engineering / Data Engineering.

CORE SKILLS

- **SQL & Databases:** PostgreSQL, Supabase; SQL (joins, subqueries, CTEs, database functions/RPCs); data modeling; migrations; BigQuery (familiar)
- **Pipelines & Data Quality:** ETL, batch import and validation, batch processing (pagination/anti-timeout), production data QA and fixes, source re-pointing and migration
- **Languages & Version Control:** SQL, Python (Pandas, NumPy, Matplotlib), JavaScript/TypeScript, React; Git/GitHub (branches, Pull Requests); Spec-Driven Development
- **BI & Visualization:** Looker Studio, Power BI, Tableau, Recharts; operational dashboards and KPIs
- **Cloud:** AWS (Certified Cloud Practitioner); Supabase (Auth, Storage, Edge Functions, RLS)

PROFESSIONAL EXPERIENCE

Associação Cactus — Junior Data Analyst • Remote • Jul 2025 – Present

- Model and maintain PostgreSQL/Supabase databases and write the queries and functions (RPCs) that centralize business rules and power products in production.
- Built mass-import pipelines (batch processing to avoid timeouts, format validation, error preview) and fixed the 1,000-record query limit — unblocking large-volume processing.
- Investigated and fixed data inconsistencies in production (e.g., an aggregation RPC that wasn't summing all uploads and skewed the per-school dashboard), applying the fix via migration and restoring trust in the metrics.
- Took part in migrating Portal Olímpico from a low-code product (Bubble) to an in-house stack (Supabase/PostgreSQL), cutting costs by ~75%.
- Technical lead for building an in-house email marketing platform (Next.js + Supabase + SendGrid + Mautic) to replace RD Station — a base of ~22k contacts segmented by tags, with ~88% projected savings (over R\$ 16k/year).
- Build operational dashboards (Looker Studio and React/Recharts) that turn raw data into decisions for leadership.
- Apply Git, Pull Requests, and spec-driven development to data/BI work.

Comunidade DS (Junior Enterprise) — Data Analyst (Volunteer) • Remote • Apr 2025 – Sep 2025

- Project with the Caçadores de Bons Exemplos initiative (mapping 7,000+ NGOs in Brazil): data cleaning, exploration, and enrichment (feature engineering).
- Created metrics (NGOs per capita, NGOs per state GDP) and geographic distribution analysis by city and state, from demographic and economic data.
- Built interactive dashboards in Looker Studio and presented weekly results to a multidisciplinary team.

PREVIOUS EXPERIENCE (BANKING & SALES)

- Itaú Unibanco — Personal Banking Account Manager (2018–2021) • Commercial Intern (2017–2018)
- Go Sinapse — Sales Development Representative / SDR (2021–2022)

~4 years in customer service, sales, and performance-metrics analysis — business acumen I now use to turn data into decisions.

EDUCATION

2023–2024 City Colleges — Dublin, Ireland

Higher Diploma in Data Analytics (NFQ Level 8) — First Class Honours

2014–2018 Universidade Presbiteriana Mackenzie — São Paulo, Brazil

Bachelor's in Business Administration with a focus on International Trade

CERTIFICATIONS

AWS Certified Cloud Practitioner — 2024
